

Virtual Dementia

The Virtual Dementia Tour is empathy training for staff and the community, as well as families of dementia patients. This highly impactful, interactive experience provides a glimpse into the world of a patient in the middle stages of dementia.

As part of our response to the rising need for specialized care of the neurologically compromised patient, it became a part of our mission to facilitate this important education for our staff, as well as for the enrichment of our partners and families.

In order to provide this specialized program, one of Pathway's core Team Members, Shonda Hendrix, LMSW, Corporate Educator, completed extensive training and obtained certification as a Virtual Dementia Tour Trainer and Dream Coach.

By participating in the Dreams Program as a Dream Coach, Shonda is able to assist our special patients in fulfilling their most closely held dreams. We believe, particularly at the end of life, that quality is the highest standard.
